

How to enable SSL in iPhone / iPad

Enabling SSL for POP3 connections

Note: depending on which device you have, and the version of the software running on it some screens may look slightly different however the settings will be the same.

Please note you will need to update the incoming mail server in your mail client to 'pop3.reg365.net'.

- Select **Settings**

- Select **Mail, Contacts, Calendars**

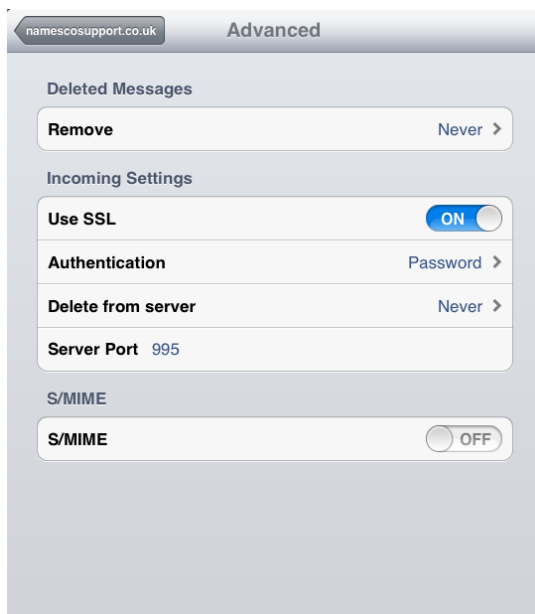

- Select the account you wish to update.

- Select **Advanced**

- Change **Use SSL** to **ON**

Enabling SSL for IMAP connections

Note: depending on which device you have, and the version of the software running on it some screens may look slightly different however the settings will be the same.

Please note you will need to update the incoming mail server in your mail client to 'imap.reg365.net'.

- Select **Settings**

- Select **Mail, Contacts, Calendars**

- Select the account you wish to update.

- Select **Advanced**

- Change **Use SSL** to **ON**
